

# Accruemulate Marathon Portfolio.

# WHAT IS A MARATHON PORTFOLIO

**A Marathon Portfolio is a Unique Portfolio of highly performing assets Traded with a strategy that combines Technical Analysis and Fundamental Analysis with very strong indicators like the PPI and CPI to execute in the financial markets for a very high return on Investment within a short period of time.**

**Our regular NFP Portfolio guarantees over 350% profits for small account owners and 500% for pros within a period of 3months, However, The Marathon Portfolio would guarantee a profit bonus of more than 500% for small accounts and over 700% for pro accounts within a very short period of 3 WEEKS.**

**These incredible numbers can be achieved by trading the Non farm payroll news event along with the FOMC news event, and these are the most influential events in the financial markets.**

**This is a very huge opportunity because there is a clear increase in R.O.I over Time.**

# PORTFOLIO FEATURES

The Marathon Portfolio has a few Unique features which makes it to stand out as our Highest Performing Portfolio.

## RISK MANAGEMENT

This Marathon Portfolio will provide you with an entirely Risk-Free Investment because there is no probability that all of the Variables will Crash, FURTHERMORE, only 10% of your Capital is exposed to the market at once, and with an 80% win rate, your capital will never be lost. The worst case scenario is if there is a Global Market Meltdown which has never happened in the History of the Financial Markets. However if there is global market meltdown, your entire Capital will be refunded.

## FIXED FAST RETURNS ( FFR )

The Marathon Portfolio Yields a Fixed return on Investment of 500%+ every 2 weeks using our Highest performing Strategy, Explained in the next page

# INVESTMENT GROWTH PLAN

THE MARATHON PORTFOLIO TRADING PLAN IS CALCULATED AT A RETURN ON INVESTMENT OF 760% FOR A PERIOD OF 2 WEEKS

THE DETAILED BREAKDOWN ON HOW THIS CAN BE ACHIEVED IS STATED BELOW.

**RISK MANAGEMENT:** The amount of risk exposed to the market each time we execute a trade is 20% of your Total Account Balance

**REWARD;** we target 10% of the amount Risked per Trade

**RISK TO REWARD RATIO;** 1:5, which means that for every 1 dollar, we aim at making 5 in return.

**WIN RATIO;** 80% ( for every 10 trades executed, we win 8 and lose 2 on average )

This is how we meet our Target;

if we win 8 out of 10, our profit will be  $100\% \times 8 = 800\%$

if we lose 2 out of 10, our loss will be  $20\% \times 2 = 40\%$

after 10 trades, we have  $800\% - 40\% = 760\%$  ROI on Average

# Available Marathon Portfolios

This is the only available Marathon Portfolio in our E-Wallet.

PORTFOLIO	MINIMUM CAPITAL	RETURN ON INVESTMENT	DURATION
NFP + FOMC	\$100,000	750%	3 Months
